

ON-LINE SUPPLEMENTARY MATERIAL

Temunović M., Šola Z., Jakšić V., Vidaković A., Liber Z., Poljak I., Bogdanović S.: Clarifying genetic and taxonomic relationships among *Pistacia* taxa (Anacardiaceae) in Croatia. Acta Bot Croat, DOI: 10.37427/botcro-2024-009

On-line Suppl. Fig. 1. Photo of the herbarium specimens of a) *Pistacia calcivora* and b) *Pistacia × saportae* collected by Radić in the area of Biokovo Mountain in 1985. Both specimens are from the herbarium collection “Herbarium of the Biokovo area” (MAKAR) in Makarska.

On-line Suppl. Fig. 2. Study area with the locations of the *Pistacia* populations sampled for this study in Croatia (eastern Adriatic).

On-line Suppl. Tab. 1 Descriptive statistics for analysed leaf morphological traits of the studied *Pistacia* populations. M – arithmetic mean; SD – standard deviation; CV – coefficient of variation (%). Analysed traits: LA – leaflet area; LL – leaflet length; MLW – maximal leaflet width; PMLW – leaflet length measured from the base to the point of maximum leaflet width; LW90 – leaflet width at 90% of leaflet length; FC – form coefficient; LA10 – angle enclosed by the main leaflet vein (the centre of leaflet blade) and the line connecting the leaflet base to a set point on the leaflet margin, at 10% of total leaflet length; RL – rachis length; PL – petiole length; NL – number of leaflets.
